

- **Style**
 - The application's final style is largely consistent with the original wireframes but was refined and improved during the development process.
- **Menu**
 - A navigation menu was included in the wireframe at the bottom of the screen to allow users to cycle through main pages easily. This was omitted from the final application because it was not a specified requirement, and the implemented app flow was intuitive enough to make it unnecessary.
- **Differences in Information**
 - Some pages in the wireframe contain information that was not included in the final application. For instance, the wireframe's Home page featured mentor information. While the initial plan was to implement a Mentor model, this feature was not required by the project instructions and was therefore deprioritized. A few other non-essential features, such as calculating details about remaining courses or summarizing a student's academic progress, were also considered but ultimately not included.
- **Term and Course Status Indicators**
 - The wireframes used color-coding to indicate whether a term or course was in progress or completed. This was identified as a potential enhancement for user experience. However, since it was not necessary to fulfill the core project requirements, it was not implemented.
- **Reminders**
 - The wireframe featured a dedicated pop-up window for setting reminders. In the final application, this was streamlined by integrating the reminder settings directly into the "Add Assessment" page, which proved to be a more efficient and logical placement.
